450k	K2 · K3 · K5		

What moved this week. Two of last plan's ROAS-justified high-CPR scale-ups **collapsed**: code128 ROAS dropped **1.17 → 0.57** (dropped from plan, now sitting in HOLD) and code15_xpage K5 dropped **1.71 → 0.89** (kept at smaller budget, watch). Meanwhile ct19-xpage rocketed **1.31 → 1.92** (now **top of the 21d window**) and code45-xp emerged as a new K2 winner at **ROAS 1.13**. Lesson: ROAS-driven CPR overrides need close weekly review — they age fast.

The 9 direct-response cells (+ brand pool)

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
1	CONTROL	Kurio 2	CVS_TUANTA_17/04_CODE14_xpage › Code 14	code14-xpage	90,812	0.81	4.0M	Lowest CPR in roster (91k). ROAS 0.81 (21d, lifted from 0.71 last week). 20 reg/7d. Cleanest always-on floor — keep big.
2	CONTROL	Kurio 2	CVS_TUANTA_01/07_CODE_CX › CX	cx	218,907	1.28	4.0M	Biggest current spender (8.3M/7d, 38 reg). cx at ROAS 1.28 in 21d window — confirmed volume + economics.
3	SCALE-UP	Kurio 3	CVS_TUANTA_14/06_INTRO_Xpage2 (consolidate 3 twins; drop the fatigued Bản sao 2)	intro2-xpage	~110,000	1.18	3.5M	3 K3 twins running, combined ~50 reg/7d at CPR ~110k. Code intro2-xpage 21d ROAS 1.18 (was 1.27, slight slip). One twin (Bản sao 2) flagged FATIGUE at CPR 265k — drop it;

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
								consolidate the other two.
4	SCALE-UP	Kurio 2	CVS_TUANTA_21/04_CODE13_reup (consolidate Bản sao + Bản sao 2)	code13-reup	~156,000	1.42	3.0M	Combined ~23 reg/7d at CPR ~156k. 21d ROAS 1.42 — top confirmed-confidence ROAS in the window. Consolidate twins.
5	SCALE-UP	Kurio 3	CVS_TUANTA_CODE13_xpage_kv - Bản sao › code13	13-xpage-kv	108,180	1.34	3.0M	CPR 108k, 17 reg/7d. Cohort code 13-xpage-kv at 21d ROAS 1.34. Roster's resolver picks the shorter code13-xpage (no ROAS) due to LP-vs-name mismatch — override here.
6	SCALE-UP	Kurio 2	CVS_TUANTA_21/04_CODE45_Reup (consolidate original + Bản sao)	code45-reup	~175,000	0.99	2.5M	Combined ~21 reg/7d at CPR ~175k. 21d ROAS 0.99 (was 1.03 — stable around break-even). Consolidate twins.
7	SCALE-UP	Kurio 2	CVS_TUANTA_25/06_CT18+19-xpage › CT19	ct19-xpage	115,666	1.92	2.0M	21d ROAS 1.92 — TOP of the window (jumped from 1.31 last week). CPR 116k, 6 reg/7d — give it room. Roster's resolver picks ct19 (token-fallback, ROAS 0.13) — the cohort drill-down's ct19-xpage is the right read.
8	SCALE-UP	Kurio 2	CVS_TUANTA_15/06_CODE45+44_Xpage › code 45	code45-xp	170,138	1.13	2.0M	NEW K2 winner. 1.87M spend / 11 reg/7d at CPR 170k.

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
								Code code45-xp at 21d ROAS 1.13 . Roster resolver lands on code4-5 (low-confidence) — cohort drilldown's code45-xp is the right read.
9	WATCH	Kurio 5	CVS_TUANTA_12/05_code15_xpage - Bản sao › code15_xpage	code15-xp-5	313,722	0.89	1.0M	Degraded vs last week (ROAS 1.71 → 0.89 , CPR ~410k → 314k). Still positive and the only viable K5 cell — keep K5 representation but cut budget from 1.5M → 1.0M. If next week ROAS < 0.7, pause.
					DR subtotal		25.0M	
10	BRAND	VTV pool	Engage - vtv + ENGAGE - vtv + Engage - Post07/05 (3 adsets, K2)	n/a	n/a	n/a	~450k	Same as last week (~150k/day × 3). Driving organic per user direction. Don't judge by CPR or direct ROAS — these are brand/reach. The CUT classifier flags them as "0 reg burning ~1M/7d" each; ignore that for this pool. Track via organic-page registrations.
					Grand total		~25.5M	

Week-over-week deltas

CODE	21D ROAS LAST WK	21D ROAS THIS WK	Δ	ACTION
ct19-xpage	1.31	1.92	+0.61	Promoted — give it more budget

CODE	21D ROAS LAST WK	21D ROAS THIS WK	Δ	ACTION
code13-reup	1.12	1.42	+0.30	Confirmed top-tier; consolidate twins
cx	1.45	1.28	-0.17	Still strong; keep at control budget
intro2-xpage	1.27	1.18	-0.09	Slight slip; one twin fatiguing
13-xpage-kv	1.45	1.34	-0.11	Holds top tier
code45-xp	— (not surfaced)	1.13	NEW	New entry — first appearance at scale
code45-reup	1.03	0.99	-0.04	Stable around break-even
code14-xpage	0.71	0.81	+0.10	Floor improving
code15-xp-5	1.71	0.89	-0.82	Degraded — cut to 1.0M, watch
code128	1.17	0.57	-0.60	Collapsed — dropped from plan
83-xpage-kv	0.39 (WATCH)	0.39 (CUT)	flat low	Escalated to CUT — junk leads confirmed

Portfolio shape

ROLE	CELLS	DAILY SPEND	% OF TOTAL	FUNCTION
CONTROL	2	8.0M	31%	Proven floor on volume — code14 + cx
SCALE-UP	6	16.0M	63%	Recently-validated winners (5 K2/K3, 1 K3)
WATCH	1	1.0M	4%	K5 representation, ROAS slipping — small leash
BRAND	3	~450k	2%	VTV Engage — organic lift, separate KPI
Total	12 adsets / 9 DR slots	~25.5M	100%

ACCOUNT	DR CELLS	SPEND
Kurio 2	6 + 3 brand	17.5M (+ 450k brand)
Kurio 3	2	6.5M
Kurio 5	1	1.0M

Three operational notes

- **Consolidate** Bản sao **twins** (rows 3, 4, 6). Running identical-creative copies splits Meta's learning data and dilutes optimization. **Row 3 (INTRO_Xpage2 K3) — drop the FATIGUE-flagged Bản sao 2 entirely** (CPR drifted 134k → 265k, ×1.97); consolidate the surviving two.

- ▶ **Roster classifier code-resolution mismatches** (rows 5, 7, 8): the smart-resolver picks the shorter base code (`code13-xpage` , `ct19` , `code4-5`) instead of the LP-stamped variant (`13-xpage-kv` , `ct19-xpage` , `code45-xp`) for these. The cohort drilldown's per-code aggregation is the source of truth for ROAS — that's what's quoted here. Worth filing a roster-tool ticket to teach the resolver about `kv/-xp` tails for these specific codes.
- ▶ **This plan is more conservative on K5 than last week** (1.0M vs 1.5M). The K5 sole rep (`code15_xpage K5`) saw ROAS halved week-over-week. If the cohort drill-down shows another K5 code lifting next week, swap rather than re-up budget.

What to pause

Everything else. Specifically:

- ▶ **Hard CUT** — both `code83-xpage-kv` adsets (K2 and K3): 10.4M/7d burned across both at ROAS 0.39 — junk leads now confirmed across two consecutive weeks.
- ▶ **Hard CUT** — `code93+94` adsets (`CODE_CX93+94 K3`, `CODE_93+94_NEW K2`): ~3.0M/7d at code-ROAS 0.11.
- ▶ **Hard CUT** — `CVS_TUANTA_12/05_code9+codeNQ` K5: 0 reg burning 653k/7d.
- ▶ **FATIGUE — refresh creative before re-launching**: `CODE17_xpage_kv` (CPR × 1.64), `CODE13_Xpage2_TG` (CPR × 1.90), `CODE81+83+84_TG K3 Bản sao 5` (CPR × 1.65), and `INTRO_Xpage2 K3 Bản sao 2` (CPR × 1.97).
- ▶ **WATCH but don't scale** — `code45-xpage_kv` (K3, 2 adsets): code-ROAS 0.50. Cheap CPR is hiding weak unit economics; verify the LP variant before adding budget.
- ▶ **Drop-from-last-plan** — `CODE128 K2`: ROAS collapsed 1.17 → 0.57 in one week. Was a "ROAS overrides CPR" pick — now neither dimension justifies it.
- ▶ **The remaining ~170 HOLD cells** — most are sub-500k/7d at 0–3 reg. Same advice as last week: pause aggressively to free Meta's budget allocator.

Caveats

- ▶ **Row 9 (`code15-xp-5 K5`) is on probation.** ROAS dropped from 1.71 → 0.89 in one week — the steepest decline in the portfolio. Keeping it at a reduced 1.0M for K5 portfolio coverage, but if next week's window ROAS < 0.7, pause without further hesitation.
- ▶ **The two ROAS-justified high-CPR scale-ups from last week (`CODE128`, `code15_xpage K5`) both decayed sharply.** The pattern is now visible: ROAS overrides on CPR work for ~1–2 weeks before unit economics catch up. Treat this week's row 9 (and arguably rows 7+8 which have ROAS > 1 but CPR ~115–170k) as live experiments needing weekly check-ins, not set-and-forget.
- ▶ **Brand attribution gap unchanged.** VTV Engage pool drives organic that lands without `ads_code` → shows as "organic page" in cohort drill-down, not ad-attributed. Track via week-over-week organic-page registrations.
- ▶ **Consolidation moves (rows 3, 4, 6) are recommendations** — if Meta's audience-split on twins is meaningfully different (HCM vs HN etc.), keep separate; otherwise fold.
