

Roster plan — 2026-05-27 (today)

9 direct-response ad sets + brand pool · daily target ~25M VND · based on data/roster-2026-05-26.json (7d window thru 2026-05-26) + data/code-roas-window.json (21d window thru 2026-05-27)

DAILY BUDGET	DR CELLS	BRAND CELLS	DR SPEND
~25.5M VND	9	3 (Engage)	25.0M
BRAND SPEND	ACCOUNTS		
450k	K2 · K3 · K5		

What moved this week. Last week's top winners **kept climbing**: ct19-xpage 1.92 → 2.19 (still TOP of the window), code13-reup 1.42 → 1.62, cx 1.28 → 1.47, intro2-xpage 1.18 → 1.28. **Blended 7d CPR dropped to 241k VND** (vs 350k target) — the cleanest week we've measured. Two things to watch: code128 stayed **fatigued and now burns 8.5M/7d** (CPR 470k, ROAS 0.61) — escalating to hard PAUSE. code83-xpage-kv K2 **still burning 8.9M/7d at ROAS 0.40** — the third weekly recommendation to pause.

The 9 direct-response cells (+ brand pool)

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
1	SCALE-UP	Kurio 2	CVS_TUANTA_25/06_CT18+19-xpage › CT19	ct19-xpage	130,384	2.19	3.5M	21d ROAS 2.19 — TOP of the window for the third straight week (1.31 → 1.92 → 2.19). CPR 130k, 5 reg/7d. Promote from rank 7 last week to rank 1. The roster's resolver still picks ct19 (token-fallback, ROAS 0.14) — cohort drilldown's ct19-xpage is the real read.
2	CONTROL	Kurio 2	CVS_TUANTA_21/04_CODE13_reup (consolidate Bản sao + Bản sao 2)	code13-reup	~156,000	1.62	3.5M	Both K2 twins ranked 2 and 3 in today's pick list. Combined ~21 reg/7d at CPR ~156k. 21d ROAS 1.62 (up from 1.42) — climbing. Consolidate the two Bản sao copies into the parent and route budget through one.

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
3	CONTROL	Kurio 2	CVS_TUANTA_01/07_CODE_CX › CX	cx	229,730	1.47	3.5M	Biggest current spender (8.7M/7d, 38 reg). ROAS recovered 1.28 → 1.47 . CPR drifted up 219k → 230k but still inside the band. Keep large — proven volume + economics.
4	CONTROL	Kurio 2	CVS_TUANTA_17/04_CODE14_xpage › Code 14	code14-xpage	86,916	0.84	3.0M	Lowest CPR in the roster (87k), 19 reg/7d. ROAS edged up 0.81 → 0.84 . Below 1.0 so don't over-fund — but the cheapest reliable floor we have. Cut from 4.0M → 3.0M to free room for the top 3.
5	SCALE-UP	Kurio 3	CVS_TUANTA_14/06_INTRO_Xpage2 (K3 trio: original + Bản sao + Bản sao [3rd])	intro2-xpage	~98,000	1.28	3.0M	3 K3 twins live (Bản sao @ CPR 92k/18 reg, Bản sao [3rd copy] @ 103k/16 reg, Bản sao 2 @ 109k/15 reg). Combined ~49 reg/7d at CPR ~99k. 21d ROAS 1.28 (up from 1.18) . The previously-fatigued Bản sao 2 recovered (CPR 265k → 109k) — keep it in. Consolidate down to one adset if Meta's audience split is identical.
6	SCALE-UP	Kurio 3	CVS_TUANTA_CODE13_xpage_kv - Bản sao › code13	13-xpage-kv	96,368	1.23	2.5M	CPR 96k, 17 reg/7d. Cohort code 13-xpage-kv at 21d ROAS 1.23 (slight slip 1.34 → 1.23, still strong).

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
								Roster's resolver picks <code>code13-xpage</code> (no ROAS) due to LP-vs-name mismatch — override here.
7	SCALE-UP	Kurio 2	CVS_TUANTA_15/06_CODE45+44_Xpage › <code>code 45</code>	<code>code45-xp</code>	180,413	1.09	2.0M	1.6M spend / 9 reg/7d at CPR 180k. Code <code>code45-xp</code> at 21d ROAS 1.09 (1.13 → 1.09, stable). Roster resolver lands on <code>code4-5</code> (low confidence) — cohort drilldown's <code>code45-xp</code> is the right read.
8	SCALE-UP	Kurio 2	CVS_TUANTA_21/04_CODE45_Reup (consolidate original + Bản sao)	<code>code45-reup</code>	~215,000	1.03	2.0M	Combined ~15 reg/7d at CPR ~217k. 21d ROAS 1.03 (up from 0.99) — sitting just over break-even. Worth keeping but no more than 2M while it proves above 1.0 in two consecutive windows.
9	WATCH	Kurio 5	CVS_TUANTA_12/05_code15_xpage - Bản sao › <code>code15_xpage</code>	<code>code15-xp-5</code>	~314,000	0.89	1.0M	Flat at probation — ROAS held 0.89 (vs 0.89 last week), not deteriorating further but not recovering. Still the only viable K5 representation. Keep at 1.0M for one more week; if next week's window ROAS < 0.7, pause and re-allocate to K3.
DR subtotal							24.0M	
10	BRAND	VTV pool	Engage - vtv + ENGAGE - vtv + Engage - Post07/05 (3 adsets, K2)	n/a	n/a	n/a	~450k	Same as last week (~150k/day × 3). Per user direction,

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
								driving organic — don't judge by CPR or direct ROAS. The CUT classifier flags all three as "0 reg burning ~1M/7d"; ignore that for this pool. Track via organic-page registrations.
Grand total							~24.5M	

Week-over-week deltas

CODE	21D ROAS LAST WK	21D ROAS THIS WK	Δ	ACTION
ct19-xpage	1.92	2.19	+0.27	Promoted to rank 1
code13-reup	1.42	1.62	+0.20	Promoted to control; consolidate twins
cx	1.28	1.47	+0.19	Recovered; keep at control budget
intro2-xpage	1.18	1.28	+0.10	Recovering; fatigued twin came back
13-xpage-kv	1.34	1.23	-0.11	Slight slip, still strong
code45-xp	1.13	1.09	-0.04	Stable; keep at 2.0M
code45-reup	0.99	1.03	+0.04	Crossed break-even; hold budget
code14-xpage	0.81	0.84	+0.03	Floor improving; reduce 4.0M → 3.0M
code15-xp-5	0.89	0.89	flat	Probation continues; pause if <0.7 next wk
code128	0.57	0.61	+0.04	Still fatigued + still burning — hard PAUSE
83-xpage-kv	0.40 (CUT)	0.40 (CUT)	flat low	3rd week pause recommendation
code85-reup	— (not surfaced)	1.02	NEW	Surfaced in window (17M spend, 31 reg) — see notes
code102-2	— (not surfaced)	1.04	NEW	Smaller signal (4.1M, 12 reg) — see notes

Portfolio shape

ROLE	CELLS	DAILY SPEND	% OF TOTAL	FUNCTION
CONTROL	3	10.0M	41%	Proven floor on volume — code13-reup + cx + code14-xpage
SCALE-UP	5	13.0M	53%	Active winners climbing or stable above 1.0 ROAS
WATCH	1	1.0M	4%	K5 representation, ROAS at probation — small leash

ROLE	CELLS	DAILY SPEND	% OF TOTAL	FUNCTION
BRAND	3	~450k	2%	VTV Engage — organic lift, separate KPI

Kurio 3	2	5.5M
Kurio 5	1	1.0M

Three operational notes

- ▶ **New codes surfaced in the 21d cohort window.** `code85-reup` at ROAS 1.02 (17M spend, 31 reg) and `code102-2` at ROAS 1.04 (4.1M, 12 reg) cleared 1.0 this window. Neither shows up in today's SCALE list — the corresponding adsets may have wound down or shifted to other naming. Worth a 5-minute manual check: if there's a live ad set running these codes, consider adding to next week's plan in slot 9 (instead of `code15-xp-5` if that one slips below 0.7).
- ▶ **Twin consolidation, take two** (rows 2, 5, 8). The previously-fatigued `intro2-xpage` `Bản sao 2` came *back* from CPR 265k → 109k this week — evidence that Meta's audience-split on twins isn't pure duplication. Soft-consolidate (drop budget on the slower copy first, watch impact before deleting) rather than hard-merging. Three twin sets to address: `code13-reup` (K2 ×2), `intro2-xpage` (K3 ×3), `code45-reup` (K2 ×2).
- ▶ **Roster classifier code-resolution mismatches** (rows 1, 6, 7) — same as last week, unchanged. The smart-resolver picks `ct19` / `code13-xpage` / `code4-5` instead of the LP-stamped `ct19-xpage` / `13-xpage-kv` / `code45-xp`. Cohort drilldown's per-code aggregation is the source of truth — that's what's quoted here. The roster-tool ticket on teaching the resolver about `kv/-xp` tails for these specific codes is still open.

What to pause

Same three categories as last week, with one escalation:

- ▶ **Hard PAUSE (escalation)** — `CVS_TUANTA_28/08_CODE128` K2: classified FATIGUE for two consecutive weeks, now **burning 8.5M/7d at CPR 470k** (×1.79 vs prior period). ROAS 0.61 — well below 1.0. Was a "ROAS overrides CPR" pick from May 19; that thesis has played out — pause now.
- ▶ **Hard PAUSE (3rd weekly recommendation)** — `code83-xpage-kv` K2 and K3 adsets: 10.5M/7d burned across both at ROAS 0.40 — junk leads confirmed across 3 consecutive weeks. The K2 adset alone burned 8.9M/7d this week with 57 reg that converted to ~ 3.5M VND revenue. If this stays live next week it becomes the single biggest cash leak in the portfolio.
- ▶ **Hard PAUSE** — `CVS_TUANTA_01/07_CODE_NM+CX` - `Bản sao 3` K3: 0 reg burning 833k/7d. `nm` `code`-ROAS only 0.32 anyway.
- ▶ **FATIGUE — refresh creative before re-launching:** `CODE13_Xpage2_TG` K2 (CPR ×2.12), `CODE93+94` K3 `Bản sao 2` (CPR ×1.86, ROAS 0.11), `CODE81+83+84_TG` K3 `Bản sao 5` (CPR ×1.88, ROAS 0), `CODE93+94` K2 `Bản sao 5` (CPR ×2.56, ROAS 0.11).
- ▶ **WATCH but don't scale** — `code45-xpage_kv` (K3, 2 adsets): `code`-ROAS 0.52 (flat WoW). Cheap CPR is hiding weak unit economics; verify the LP variant before adding budget.
- ▶ **The remaining ~165 HOLD cells** — most are sub-500k/7d at 0–3 reg. Same advice as last week: pause aggressively to free Meta's budget allocator.

Caveats

- ▶ **Row 9 (code15-xp-5 K5) still on probation.** ROAS held at 0.89 – not deteriorating but not recovering. One more week. If next week's window ROAS < 0.7, pause and re-allocate the 1.0M to a K3 cell.
- ▶ **The "ROAS-overrides-CPR" pattern remains hot** – CODE128's collapse confirms 1-2 week shelf life for any pick driven by ROAS > 1 + CPR > target. Today's row 1 (ct19-xpage) has CPR 130k and ROAS 2.19 so it's safe; row 8 (code45-reup) just crossed break-even – keep on weekly review.
- ▶ **Brand attribution gap unchanged.** VTV Engage pool drives organic that lands without ads_code → shows as "organic page" in cohort drill-down, not ad-attributed. Track via week-over-week organic-page registrations.
- ▶ **Blended 7d CPR is 241k VND** (vs 350k target). This is the cleanest week measured since the pipeline started. Most of the lift came from cx 's spend ramp (5x WoW) at ROAS 1.47 and the K3 intro2-xpage trio's CPR drop. If those two soften, target slips back to ~300k+.
- ▶ **Consolidation moves (rows 2, 5, 8) are soft recommendations** – the intro2-xpage Bán sao 2 evidence (came back from FATIGUE to top-3 PICK in one week) suggests Meta is doing something real with the twin split. Don't hard-merge.
