The 9 direct-response cells (+ brand pool)

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
1	CONTROL	Kurio 2	CVS_TUANTA_17/04_CODE14_xpage › Code 14	code14	94,549	0.71	4.25M	Lowest CPR in roster (95k). ROAS 0.71 (21d), 20 reg last week. The cleanest always-on floor — keep big. (+750k vs prior draft, absorbing the deferred test slot.)
2	CONTROL	Kurio 2	CVS_TUANTA_01/07_CODE_CX › CX	cx	238,997	1.45	4.25M	Biggest current spender (5.7M/week, 24 reg). Cohort drill-down shows <code>cx</code> at ROAS 1.45 — the roster's confidence gate hid it. (+750k vs prior draft, absorbing the deferred test slot.)
3	SCALE-UP	Kurio 3	CVS_TUANTA_14/06_INTRO_Xpage2 (consolidate Bản sao + Bản sao 2)	intro2-xpage	~125,000	1.27	3.0M	Combined ~30 reg/week, code <code>intro2-xpage</code> at ROAS 1.27. Consolidate twins — running two copies of the same creative just splits learning data.
4	SCALE-UP	Kurio 2	CVS_TUANTA_21/04_CODE13_reup (consolidate Bản sao + Bản sao 2)	code13-reup	~180,000	1.12	3.0M	Combined ~21 reg/week, ROAS 1.12. Highest confirmed ROAS in the high-confidence set. Consolidate twins.
5	SCALE-UP	Kurio 2	CVS_TUANTA_21/04_CODE45_Reup (consolidate original + Bản sao)	code45-reup	~190,000	1.03	2.5M	Combined ~20 reg/week, ROAS 1.03. Stable above 1.0. Consolidate twins.

#	ROLE	ACCT	CAMPAIGN › ADSET	CODE	7D CPR	ROAS	DAILY BUDGET	REASON
6	SCALE-UP	Kurio 3	CVS_TUANTA_CODE13_xpage_kv - Bản sao › code13	13-xpage-kv	127,932	1.45	2.5M	CPR 128k. Cohort code 13-xpage-kv at ROAS 1.45 — top of the 21d window. Currently invisible to roster ROAS gate due to LP-vs-name mismatch.
7	SCALE-UP	Kurio 2	CVS_TUANTA_28/08_CODE128 › CODE128	code128	~400,000	1.17	2.0M	Replaces code83-xpage-kv WATCH. 4.8M spent / 12 reg over 3 days. CPR is higher than scale-line but code code128 ROAS 1.17 in 21d window means each dong is paying back — unit economics override the CPR.
8	SCALE-UP	Kurio 2	CVS_TUANTA_25/06_CT18+19-xpage - Bản sao › CT19	ct19-xpage	140,439	1.31	1.5M	CPR 140k, 5 reg/week. Cohort code ct19-xpage at ROAS 1.31. Lower volume but excellent unit economics — give room to grow.
9	SCALE-UP	Kurio 5	CVS_TUANTA_12/05_code15_xpage - Bản sao › code15	code15_xpage	~410,000	1.71	1.5M	Replaces CODE85+86_reup burn-down. 4.1M spent / 10 reg over 3 days. ROAS 1.71 is the highest in the 21d window. Also adds Kurio 5 representation (previously zero).
					DR subtotal		24.0M	
10	BRAND	VTV pool	Engage - vtv + ENGAGE - vtv + Engage - Post07/05 (3 adsets, K2)	n/a	n/a	n/a	~450k	Re-added per user direction — driving organic. Same daily budget as last week (~150k/day each × 3). Don't judge by CPR or direct ROAS — these are brand/reach plays. Track via organic lift, not the funnel attribution.
					Grand total		~24.5M	

Portfolio shape

ROLE	CELLS	DAILY SPEND	% OF TOTAL	FUNCTION
CONTROL	2	8.5M	34%	Proven floor on volume — code14 + cx. (Up from 7.0M, absorbing the deferred test slot.)
SCALE-UP	7	15.5M	62%	Recently-validated winners getting more room.
BRAND	3	~450k	2%	VTV Engage — organic lift, separate KPI.
Total	12 adsets / 9 DR slots	~24.5M	98%	

Account diversity

ACCOUNT	DR CELLS	SPEND
Kurio 2	6 + 3 brand	~17M (+ 450k brand)
Kurio 3	2	5.5M
Kurio 5	1	1.5M

Three operational notes

- ▶ **Consolidate** *Bản sao* **twins** (rows 3, 4, 5). Running two identical-creative copies splits Meta's learning data and dilutes optimization. Consolidating reclaims cells AND exits learning phase faster (Meta needs ~50 conv/week per adset to optimize fully).
- ▶ **All 9 DR cells will exit learning phase** within a week at these budgets (reg/week per cell $\approx$ 22–105). The current 198-cell sprawl has most cells at 2–7 reg/week — permanent suboptimization.
- ▶ **No test slot this week — deferred.** Phase A creative isn't ready yet; the budget that would have funded it (1.5M) has been folded into rows 1 (CODE14) and 2 (CX) at +750k each. Reintroduce a test slot the week the Phase A creative lands.

What to pause

Everything else. Specifically:

- ▶ The 2 zero-reg CVS adsets in CUT (CVS_TUANTA_16/06_CODE13 *Bản sao* 4 + CVS_MASS_21/11_RLTH *Bản sao* 8) — burning 1.85M/week with 0 reg.
- ▶ The high-CPR CUTs: CODE85_reup (CPR 716k), CX-94 (CPR 771k) — 11M+/week of clear losers.
- ▶ The 5 FATIGUE cells (CODE17_xpage_kv, CODE45+44_Xpage_TG, CODE13_Xpage2_TG, CODE19-TG, CODENM+CX) — refresh creative before re-launching; don't keep them running at fatigued CPR.
- ▶ The remaining ~180 HOLD cells — most are at <500k spend / 0–3 reg per week, statistically dead. Pause aggressively.

Caveats

- ▶ **Row 7 (CODE128) and Row 9 (code15_xpage) have CPR around 400k** — above the scale-line of 245k. The justification is ROAS-driven (1.17 and 1.71 in the 21d window). If their next-week CPR climbs above 500k while ROAS holds, keep them; if ROAS collapses, cut immediately.

- ▶ **Brand attribution gap.** The VTV Engage pool drives organic that doesn't get a Meta ads_code at registration — it shows up in the cohort drill-down as "organic page" or "other / untracked", not as ad-attributed. Don't expect these to appear in the ROAS-ranked codes; track separately via week-over-week organic-page registrations.
- ▶ **The consolidation moves (rows 3, 4, 5) are recommendations, not mandates.** If Meta's audience-split logic on the twins is meaningfully different (e.g. one targets HCM, one HN), keep them separate. Otherwise, fold them.
